

Watermark Student Learning & Licensure + GoReact

Deepen the impact of authentic assessment

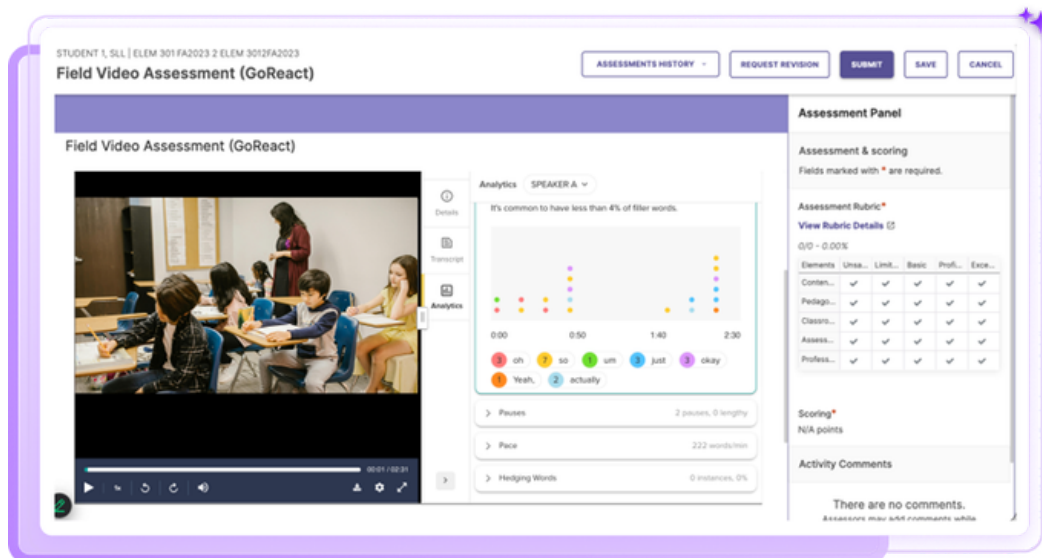

Explore how Watermark Student Learning & Licensure's integration with GoReact, powered by Echo360 equips licensure and skills-based programs with robust evidence to demonstrate **student competency and program effectiveness.**

What users are saying about using GoReact and Student Learning & Licensure together:

"We're excited to have all of the functionality in one platform for field experience."

"I think GoReact videos benefited my development as a student teacher through the observation of my lessons from a different perspective."

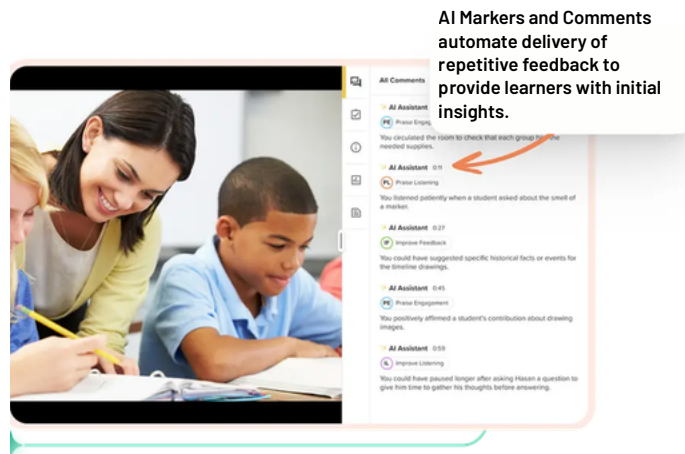

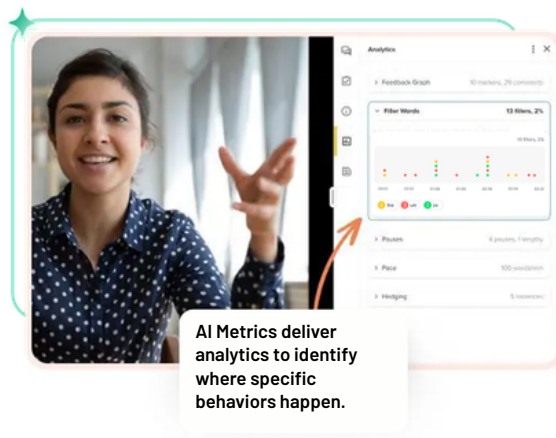

Bringing together the best tools to support licensure program success

Our Student Learning & Licensure integration with GoReact captures the full picture of student learning. **Take advantage of an enhanced ability to use video observations, skill coaching, and outcome assessment from the classroom to the field.** In one system, students can demonstrate skill development while receiving feedback from faculty or mentors.

- **Students can record, upload, or live-stream their demonstration of skills.**
- **The AI Assistant in GoReact provides immediate action items shortly after the submission of an artifact,** allowing room for the student to have more practice, better self-reflection, and faster skill development.
- **Remote supervision frees up time for instructors, coaches, mentors, and supervisors** to deliver expert insights and personalized coaching.

Facilitate meaningful feedback your students can use in the classroom and their careers

- **Give text, audio, or video feedback synced to precise moments in student videos.** Control when feedback is shared so you can grade at a time, pace, and place that works for you.
- **With the AI Assistant in GoReact, auto-generate immediate feedback and flag specific behaviors** using pre-generated markers such as clarity and engagement.
- **Increase the quantity and diversity of feedback received** by enabling Peer Review or Guest Review. Limit who can see and critique videos by managing access.
- **Automate recurring feedback** with up to 30 customizable, shareable video markers. With one click, you can add a color-coded marker to tag common mistakes or competencies.

Raise the bar on authentic, rubric-based assessment through video

- **Strong assessment practices, and your ability to drive impactful improvements, start with students and instructors.** The integration of Student Learning & Licensure with the video assessment tool, GoReact, boosts your ability to ensure students are developing the skills they need in the field.
- It ensures that instructors and programs are truly **using authentic evidence to provide more reliable assessments of learning outcomes achievement.**
- In turn, you can trust you're analyzing and taking action from a strong position as you roll findings up to drive course, program, and institutional improvements. **Demonstrate your compliance with accreditor and licensure standards.**

Expand your program footprint and save costs with remote supervision

- Eliminate one of the biggest constraints on where, and for whom, you can support fieldwork. With GoReact in Student Learning & Licensure, your only limitation is internet access. **Students can be supervised remotely and still get the quality feedback they need and meet observation requirements for licensure.**
- **Save time and money with remote supervision.** Free up time for mentors and supervisors and reduce program costs with video assessment tools that can help you achieve more with less.
